

I Tried to Be Vegan... But Nature Said 'No'

Exploring the science of ecology and the sacred wisdom of nature's food web

Are you someone who has ever questioned the “perfect” diet, struggled with veganism, or wondered what nature truly intended for us?

Then this book is for you.

I Tried to Be Vegan... But Nature Said 'No' is not a debate—it is a journey. It explores biology, ecology, and ancestral wisdom to reveal why all life feeds life, and how compassion must be rooted in ecology, not ideology.

What Makes This Book Unique?

- A bold exploration of the vegan paradox and its ecological blind spots
- A journey through soil, seasons, and the sacred food web
- A deeply personal narrative blending science, philosophy, and ancestral wisdom
- A call to rejoin—not escape—the cycles of life and death
